Date:

S.No: 12 Exp. Name: Program to implement, 0/1 Knapsack problem using Dynamic Programming

Aim:

Write a program to implement, 0/1 Knapsack problem using Dynamic Programming

Source Code:

```
Knapsack.c
#include<stdio.h>
#include<conio.h>
int max(int a,int b)
   return(a>b)?a:b;
}
int knapsack(int W,int v[],int w[],int n)
   if(n==0||W==0)
      return 0;
    if(w[n-1]>W)
     return knapsack(W,v,w,n-1);
       return \ max(v[n-1]+knapsack(W-w[n-1],v,w,n-1),knapsack(W,v,w,n-1));\\
}
void main()
   int n,W;
   printf("Enter number of items:");
   scanf("%d",&n);
   int v[n],w[n];
   printf("Enter value and weight of items:");
   for(int i=0;i<n;i++)</pre>
   {
      scanf("%d %d",&v[i],&w[i]);
   printf("Enter size of knapsack:");
```

Execution Results - All test cases have succeeded!

printf("Maximum value in 0/1 knapsack :%d",knapsack(W,v,w,n));

Test Case - 1	
User Output	
Enter number of items: 3	
Enter value and weight of items: 100 20	
50 10	50 10
150 30	150 30
Enter size of knapsack: 50	
Maximum value in 0/1 knapsack :250	

Test Case - 2				
User	Output			
Enter	number of items: 4			
Enter	value and weight of items: 10 23			

scanf("%d",&W);

}
